

Commitment

Our company is committed to becoming more sustainable and more circular to provide resource security for the next generations while generating more profit. We believe that waste does not have a place in a resource efficient future, and that extraction of virgin resources will be replaced by highly sophisticated supply chain systems, that will keep materials in use indefinitely. We take our responsibility very seriously and we would like your support on our journey from a linear to a circular way of operating and doing business.

We are working to incorporate circularity in the way we are doing things, and have committed to the Circular Tayside charter. The commitments we have agreed to are:

- ☐ To continually monitor and assess the circularity of our organisation internally, with the aim to increase it.
- ☐ To train key staff to understand circular economy practices in order to lead the transition from linear to circular.
- ☐ To work with circular suppliers.
- ☐ To manufacture our products in a circular manner. To implement a circular business model for providing our services/products.
- ☐ To have circular operations in our premises.
- ☐ To manufacture our products in a circular manner. To implement a circular business model for providing our services/products.
- ☐ To have circular operations in our premises.

This is an ambitious but essential plan that will require all departments and team members to collaborate closely, come up with ideas and be open to new ways of doing things. It is an investment to our future and we can't do it without you.

Thank you for being part of the solution!
